

ASAD BASHIR

DevOps Engineer

+92 3400569133 | asadbashir2229526@gmail.com | Islamabad, Pakistan | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

DevOps Engineer with hands-on experience in CI/CD pipelines (GitHub Actions), AWS (EC2, ECR, ECS Fargate), Docker, Kubernetes, GitOps with ArgoCD, and security scanning with Snyk and Trivy. Worked on real client projects in production environments. Strong foundation in Linux, IaC (Ansible), secrets management (Vault, AWS Secrets Manager), and monitoring with Prometheus and Loki.

CORE SKILLS

- **Cloud & Infra:** AWS EC2, ECR, ECS Fargate, RDS, S3, CloudFront, ALB, Auto Scaling, VPC, IAM, Secrets Manager
- **DevOps & CI/CD:** GitHub Actions, Jenkins, Docker, Docker Compose, Kubernetes (k3s/Minikube), Helm, Ansible, Terraform (basics)
- **GitOps & Security:** ArgoCD, GHCR, Snyk (Dependency + SAST), Trivy, OWASP, AWS WAF, OIDC Auth, HashiCorp Vault, External Secrets Operator
- **Monitoring & Logging:** Prometheus, Grafana, Loki, Promtail, kube-prometheus-stack, CloudWatch
- **Scripting & OS:** Bash/Shell, YAML, JSON, Linux (CentOS/Ubuntu), Git/GitHub
- **Development:** Node.js, Express.js, React, MongoDB (MERN Stack), REST APIs
- **Soft Skills:** Troubleshooting, Problem-Solving, Teamwork, Communication, Time Management

PROFESSIONAL EXPERIENCE

DevOps Intern — CyberoidTech — Islamabad

Mar 2026 – Present

- Built CI/CD pipelines with GitHub Actions using OIDC-based AWS authentication — no static credentials needed.
- Pushed Docker images to AWS ECR and automated deployments to EC2 via GitHub Actions workflows.
- Worked on ECS Fargate production setup: cluster creation, IAM Task Execution Roles, Task Definitions with Secrets Manager integration, and ALB with path-based routing for two services.
- Integrated Snyk (dependency + SAST) and Trivy image scanning into CI pipelines — blocking deployments on critical vulnerabilities before they reach production.
- Debugged live staging issues on ClubSoft projects: NEXT_PUBLIC_* build-time variable injection, env file conflicts between containers, and RDS Security Group misconfiguration blocking PostgreSQL.
- Worked with ArgoCD GitOps architecture (deploy branch + GHCR + k3s), HashiCorp Vault (Kubernetes auth), and External Secrets Operator for secure secrets management.

DevOps Intern — Techinn360 — Islamabad

Dec 2025 – Feb 2026

- Built and maintained GitHub Actions CI/CD pipelines, reducing manual deployment time by ~50–60%.
- Containerized applications using Docker and managed multi-service environments with Docker Compose for consistent dev and production setups.
- Deployed and configured AWS infrastructure: EC2, RDS, S3, and CloudFront with WAF for security and scalability.
- Configured automated RDS backups and resolved production issues including server storage limits, restoring services with minimal downtime.

Hands-On DevOps Practice

[GitHub](#)

- Set up full Kubernetes stack in Minikube: ArgoCD, HashiCorp Vault, External Secrets Operator, Helm charts, and kube-prometheus-stack with Loki + Promtail monitoring.
- Automated multi-server provisioning using Ansible playbooks and roles. Configured ALB + Auto Scaling Groups for EC2-based applications.
- Designed AWS VPC architecture with public/private subnets, route tables, security groups, and NAT gateway following best practices.

PROJECTS

Final Year Project – Furnished Home Rental Platform (MERN Stack)

[Repo](#)

- Full MERN platform with advanced search, Stripe payments, real-time availability, AI assistant, and admin panel for listings and reservations.

Heavy Machinery Selling Platform (MERN Stack)

- Full-stack application with search, filtering, secure payments, inventory management, and AWS deployment.

EDUCATION & CERTIFICATIONS

BS Computer Science (BSCS) 2021 – 2025

FSC – Computer Science (81%) 2019 – 2021

AWS Certified Cloud Practitioner

KEY ACHIEVEMENTS

- Eliminated static AWS credentials in production by implementing OIDC-based authentication with GitHub Actions — zero long-lived secrets in pipelines.
- Integrated Snyk + Trivy security scanning into CI/CD pipelines on real client projects, enabling automated vulnerability blocking before deployment.
- Debugged and fixed production-level issues on live ClubSoft projects: container env conflicts, RDS Security Group misconfiguration, and Next.js build-time variable injection.
- Built complete local Kubernetes environment replicating production stack: ArgoCD, HashiCorp Vault, External Secrets, Helm, and full Loki + Prometheus monitoring.
- Reduced manual deployment time by ~50–60% by building automated GitHub Actions CI/CD pipelines with Docker-based workflows.
